OUR REF. : bm/19 October 2017
(REPORT No. 4873 / SAMPLE No. 23712)

RE. : **WATER ANALYSIS – WOODSTOCK**

Good Day,

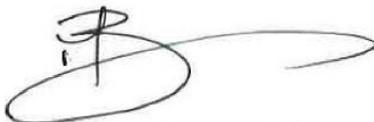

We attach our Certificate of Analysis relevant to a water sample, received on the 13th October 2017.

The water was of fairly good chemical quality and complied with the SANS 241-1:2015 chemical limits, relevant to parameters measured.

It should be noted that not all the chemical and bacteriological parameters of Tables 1 and 2 of SANS 241-1:2015 was requested, hence we cannot comment on suitability for domestic use.

The corrosivity ratio was high at 3.4, a value of <1 is suitable for pipes and fixtures.

Regards,

NATASIA VAN BINSBERGEN

TERMS AND CONDITIONS

Most water uses in South Africa have water quality requirements specified by the national Water and Sanitation Department's Water Quality Guideline and related legislation. The only standard for drinking water is SANS 241. The water quality varies according to range of factors including the source, treatment process and how long it has been stored.

The choice of the source of water depends upon the purpose of use. Our **AQUIFER** water is tested and certified **E-Coli FREE** at a point in time. **E-Coli sources should be treated with care and avoid accidental contact or consumption.**

NON POTABLE / FIT FOR PURPOSE

Water is non potable, clean and filtered at source, or on delivery, however we do not provide as a substitute for drinking water and all use is at the client's risk. The City of Cape Town has a detailed report relating to the use of **NON POTABLE** water and especially water sourced from their own treatment plants, which we would only provide with clients full knowledge and written undertaking of the use. <https://www.greencape.co.za/assets/Uploads/Summary-Guidelines-for-Alternative-Water-Installations-for-19-Oct-2017-h....pdf>

Aquifer water can contain additional minerals and components that do not comply with SANS 241 and clients are requested to consult prior to accepting any water as being fit for purpose. Further filtration or chemicals may be added.
